Belt Options

**Piano Hinge Belts** share load and wear factors evenly providing trouble-free service for light to medium duty material handling applications. Ideal for recycling, stamping, forging, and machining industries.

**Combination Belts** with PVC or rubber belting have cross supports for strength and stability. This is a lighter weight belt option for moving recyclable materials with the added benefit of high resistance to abrasion and liquids.

**Z-Pan Belts** are made of overlapping steel pans mounted on chain and are ruggedly designed to offer ultimate performance for high impact, or unpredictable loading conditions. A cleaner discharge and durable continuous service under the more difficult operating conditions.

**Apron Belts** are made of overlapping steel pans mounted on chain and they are designed to absorb the impact of large lumps and repeated loading with minimum spillage or breakage. A cleaner discharge and durable continuous service under the more difficult operating conditions.

Conveyor Accessories

- **Hopper Extensions**
- **Infeed Hoppers**
- **Pit Flashing**
- **controls**
- **Load Metering Rakes or Drums**
- **Discharge Chutes**
- **Top Covers**
- **Transition Guides**
