

# OEM SERVICES

## ENGINEERING ASSISTANCE

- Integration assistance
  - Our design and engineering team can assist in fitting our equipment into your system designs.
- Drawings to allow easier and more reliable layouts
  - Approval drawings can be provided for every order or per standard part number.
- Applications assistance where our experience allows
  - Utilizing our many years of diverse experience, we will ask for application details to assist in pointing out any red flags we perceive

## AFTERMARKET SUPPORT AND SERVICES

- EVI can support you or your end user in parts and aftermarket service.
  - Every piece of EVI equipment has its own file. Parts usage and service calls are tracked, which allows us to notice unusual wear or parts replacements.
  - EVI Product Managers & Engineers are available to speak directly with you or your end user to help troubleshoot an onsite issue, but will not carry out direct sales to end users, even on replacement parts. We will not become your competition.
- Spare parts stocking lists
  - We can provide the end users with a list of typical spares.
  - Our assembly drawings can accompany any spare parts list to help ID parts.

# OEM SERVICES

## SUPPLY CHAIN PARTNER

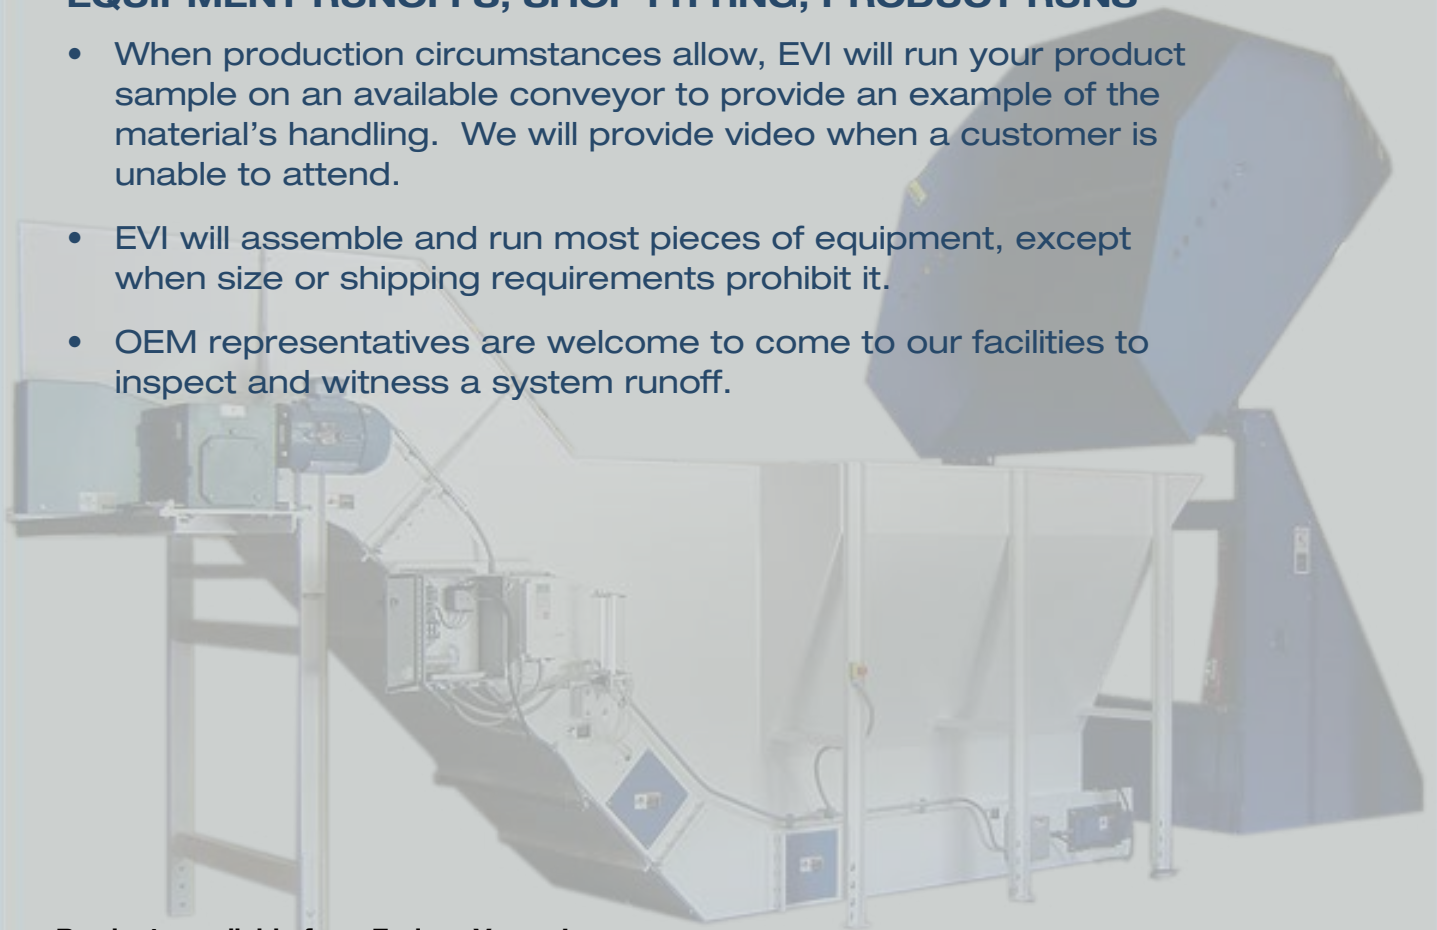

- We can help you develop a standard offering for ease of repeatability in the manufacturing and integration processes. OEM part numbers can be assigned to ensure ease of ordering.

## PRIVATE LABELLING

- Equipment can be powder coated and private labelled to match the OEM equipment.
- Drawings, shipping documents and other end-user documents can be non-labeled or re-labeled to the OEM.

## EQUIPMENT RUNOFFS, SHOP FITTING, PRODUCT RUNS

- When production circumstances allow, EVI will run your product sample on an available conveyor to provide an example of the material's handling. We will provide video when a customer is unable to attend.
- EVI will assemble and run most pieces of equipment, except when size or shipping requirements prohibit it.
- OEM representatives are welcome to come to our facilities to inspect and witness a system runoff.
